MailStore Version 22.4 available

Multi-factor authentication for MailStore Service Provider Edition and improved resource management

Viersen, December 07, 2022 +++ MailStore, the German specialist for email archiving, today launches the new version 22.4 of its MailStore email archiving solutions. With immediate effect, the MailStore Service Provider Edition supports multi-factor authentication in the new version. In addition, the resource management of the software solutions MailStore Server, MailStore Service Provider Edition (SPE) and MailStore Home has been improved.

With multi-factor authentication, the security of MailStore SPE has again been optimized: Admins can now secure access to the Management Console using multi-factor authentication. After entering username and password, an access code must also be entered, which is generated by a freely selectable Authenticator app. Subsequent use of the Management API requires the entry of a password. The password must be generated in the Management Console for each admin for whom multi-factor authentication is enabled. This way, the API can be used without entering another factor.

More information about the MailStore V22.4 release can be found in this blog post.

About MailStore

MailStore Software GmbH from Viersen near Duesseldorf, a subsidiary of OpenText, "The Information Company" (NASDAQ: OTEX) (TSX: OTEX), is one of the world's leading manufacturers of email archiving solutions. More than 80,000 companies, public authorities and educational institutions in more than 100 countries rely on the products of the German specialist.

In addition, MailStore offers the MailStore Service Provider Edition (SPE), a solution specifically for service providers who can use it to offer their customers legally compliant email archiving as a managed service.

MailStore Home is another product in the portfolio that allows individual users to archive their private emails free of charge. MailStore Home is currently used by over 1,000,000 users worldwide.
